Molecular Mechanisms Underlying Cell Adhesion and Migration

Message from the Guest Editor

Cell adhesion and cell migration are essential biological processes for multicellular organisms. The spatiotemporally-controlled fine coordination of cell adhesion and migration is key to well-organized organogenesis and embryogenesis. This is also true for maintaining tissue/organ homeostasis and normal functions, such as immune response, tissue repair, and wound healing. Abnormal cell adhesion and migration lead to various diseases, such as cancer metastasis, thrombosis, inflammation, etc. Numerous molecules participate in cell adhesion and migration. In different cell types, molecular mechanisms driving and regulating cell adhesion and cell migration are often different. Understanding how cell adhesion and migration are achieved precisely under different biological scenarios is an ongoing challenge. This Special Issue is open to comprehensive reviews, original research papers, and high-quality communications to discuss the molecular mechanisms underlying cell adhesion and migration during normal development and diseases. In particular, studies in the fields of molecular structure and dynamics, molecular biophysics, and cellular biochemistry are welcome.

About the Journal

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Editors-in-Chief

Prof. Dr. Peter E. Nielsen

Department of Cellular and Molecular Medicine, Faculty of Health and Medical Sciences, University of Copenhagen, Blegdamsvej 3C, DK-2200 Copenhagen, Denmark

Prof. Dr. Lukasz Kurgan

Department of Computer Science, Virginia Commonwealth University, Richmond, VA 23284, USA

Author Benefits

Open Access

– free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Biochemistry)
