

Special Issue

Genomics-Assisted Breeding: Strategies, Advances and Challenges

Message from the Guest Editor

Crop improvement has become the most effective way to boost global food security. Compared with conventional breeding approaches, marker-assisted selection has greatly enhanced the efficiency of plant breeding and crop improvement. Recently, several novel genomics-assisted breeding (GAB) tools/approaches have been extensively studied and achieved significant progress in plant science. However, their successful implementation in practical breeding for the improvement of complex traits has rarely been explored. This Special Issue is dedicated to research articles and reviews which cover recent progress in the identification of quantitative trait loci, quantitative trait nucleotides, and functional markers associated with complex traits in agronomically important crops, and functional characterization of a causative gene. New tools and methodologies and their breeding applications involved in high-throughput phenotyping and genotyping, association and linkage mapping, GS and phenotype prediction, gene and genome editing, de novo domestication, genome design for future crops, artificially synthesized crops, and integrative GAB approaches are also of particular interest.

About the Journal

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Editors-in-Chief

Prof. Dr. Peter E. Nielsen

Department of Cellular and Molecular Medicine, Faculty of Health and Medical Sciences, University of Copenhagen, Blegdamsvej 3C, DK-2200 Copenhagen, Denmark

Prof. Dr. Lukasz Kurgan

Department of Computer Science, Virginia Commonwealth University, Richmond, VA 23284, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Biochemistry)
