

## Special Issue

# The Role of Scavenger Receptors in Health and Disease

### Message from the Guest Editors

Scavenger receptors (SRs) are a heterogeneous group of membrane-bound receptors that recognize and internalize a wide range of ligands, including modified lipoproteins, pathogens, and cellular debris. There are many types of scavenger receptors with diverse biological activities—such as SR-A (SR-A1, MARCO), LOX-1 (SR-E1), SR-B1 (SCARB1), and CXCL16 (SR-PSOX). Among them, CD36 (SR-B2) has been extensively studied for its multifaceted functions. In homeostatic conditions, CD36 is expressed by a wide variety of cell types, where it supports various functions. It was introduced as a cell adhesion molecule on platelets and erythrocytes with a high affinity for collagens and thrombospondin-1, but later on, it was found to support many other roles, from the recognition, uptake, and processing of fatty acids, and even the recognition and clearance of fungi and bacteria, just to name a few. As a result, it has acquired many names along the way, from glycoprotein IV (GPIV) to fatty acid translocase (FAT), scavenger receptor class B (SR-B2), or glycoprotein 88 (GP88). This Special Issue is an open invitation to encourage going beyond the edges of this already-expanding universe.

### Guest Editors

Dr. Laura Cristina Ceafalan

1. Cell Biology, Neurosciences and Experimental Myology Laboratory, Victor Babeş Institute of Pathology, 050096 Bucharest, Romania
2. Department of Cellular and Molecular Biology and Histology, Carol Davila University of Medicine and Pharmacy, 050474 Bucharest, Romania

Prof. Dr. Mihail E. Hinescu

1. Department of Cellular and Molecular Biology and Histology, "Carol Davila" University of Medicine and Pharmacy, 020021 Bucharest, Romania
2. "Victor Babeş" National Institute of Pathology, 050096 Bucharest, Romania

### Deadline for manuscript submissions

closed (30 April 2026)

## About the Journal

### Message from the Editorial Board

*Biomolecules* is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

### Editors-in-Chief

Prof. Dr. Peter E. Nielsen

Department of Cellular and Molecular Medicine, Faculty of Health and Medical Sciences, University of Copenhagen, Blegdamsvej 3C, DK-2200 Copenhagen, Denmark

Prof. Dr. Lukasz Kurgan

Department of Computer Science, Virginia Commonwealth University, Richmond, VA 23284, USA

---

### Author Benefits

#### Open Access

– free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Biochemistry)
