Molecular Basis of Cardiac Fibrotic Remodeling: Prognosis of Fibrosis in the Heart

Message from the Guest Editors

Cardiac fibrosis is a pathological process with excessive secretions and deposits of extracellular matrix proteins such as collages, elastin, proteoglycans, and fibronectin. The differentiation of fibroblasts to myofibroblasts is recognized as a critical process in fibrosis. Transforming growth factor beta (TGF- β) promotes this process through Smad-2/3-dependent or -independent pathways. Cellular sources and molecular mechanisms that regulate TGF- β production and function remain incompletely understood. Atrial fibrotic remodeling is associated with atrial fibrillation. Expansion and dilatation of ventricles result in cardiac remodeling and eventual heart failure. Fibrotic remodeling is one of the major features of cardiac remodeling. Molecules that prevent or ameliorate cardiac fibrosis may be novel targets for chronic heart failure, coronary artery disease, diabetic cardiomyopathy, or other heart disease. The aim of this Special Issue is to highlight recent advances of molecules with definitive mechanisms of cardiac fibrosis and remodeling. Investigators of fibrotic remodeling of the heart are especially encouraged to submit.

About the Journal

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Editors-in-Chief

Prof. Dr. Peter E. Nielsen

Department of Cellular and Molecular Medicine, Faculty of Health and Medical Sciences, University of Copenhagen, Blegdamsvej 3C, DK-2200 Copenhagen, Denmark

Prof. Dr. Lukasz Kurgan

Department of Computer Science, Virginia Commonwealth University, Richmond, VA 23284, USA

Author Benefits

Open Access

– free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Biochemistry)
