Advances in Basic and Clinical Periodontal Research

Message from the Guest Editor

Periodontal disease can be described as one of the most prevalent diseases of human beings worldwide. Periodontitis is a dysbiotic inflammatory disease with a negative influence on systemic health. Based on the improved knowledge of the mechanisms involved in tissue regeneration, various regenerative therapies have been developed and clinically introduced. Especially, signaling molecules and advanced biomaterials are key players in novel treatment approaches. Although periodontal regeneration has become clinical reality, much needs to be done to prevent periodontitis and to develop more efficient and predictable treatment modalities. The aim of this Special Issue is to publish original research articles in basic and clinical periodontology. Special focus is placed on, but not limited to, biological substances/materials and their functions, structures, and interactions with host and/or other molecules. This Special Issue also welcomes submissions of articles on soft and hard tissue regeneration. Review articles highlighting the current challenges and future directions for the prevention and treatment of periodontal disease will be considered for inclusion in this Special Issue.

About the Journal

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Editors-in-Chief

Prof. Dr. Peter E. Nielsen

Department of Cellular and Molecular Medicine, Faculty of Health and Medical Sciences, University of Copenhagen, Blegdamsvej 3C, DK-2200 Copenhagen, Denmark

Prof. Dr. Lukasz Kurgan

Department of Computer Science, Virginia Commonwealth University, Richmond, VA 23284, USA

Author Benefits

Open Access

– free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Biochemistry)
