# Prion Diseases: A Model for Neurodegenerative Disorders

### Message from the Guest Editor

Prion diseases or transmissible spongiform encephalopathies are invariably fatal neurodegenerative disorders of humans and animals. They are caused by prions, self-propagating proteinaceous infectious particles which consist of a misfolded and aggregation-prone isoform of the cellular prion protein (PrPC), termed PrP<sup>Sc</sup>. Over the last decade, the concept of prion-like mechanisms in other neurodegenerative diseases evolved, based on the principle of seeding, spreading, and propagation of protein misfolding in the brains of affected individuals. These mechanisms were initially ascribed to prions and now have been well established for other neurodegenerative disorders, such as Alzheimer's or Parkinson's disease. Still, prion diseases are exceptional as their natural transmission is well documented while not observed, for example, in Alzheimer's or Parkinson's disease. Despite this difference, the structural characteristics and shared mechanisms of propagation or cell-to-cell transmission suggest potential common therapeutic targets and principles of diagnostic assays, which will be discussed in this Special Issue.

## About the Journal

### Message from the Editorial Board

*Biomolecules* is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

### Editors-in-Chief

Prof. Dr. Peter E. Nielsen

Department of Cellular and Molecular Medicine, Faculty of Health and Medical Sciences, University of Copenhagen, Blegdamsvej 3C, DK-2200 Copenhagen, Denmark

Prof. Dr. Lukasz Kurgan

Department of Computer Science, Virginia Commonwealth University, Richmond, VA 23284, USA

---

### Author Benefits

#### Open Access

– free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Biochemistry)
