Recent Advances in Proteoglycans

Message from the Guest Editor

Proteoglycans are a ubiquitous family of heavily glycosylated proteins with distinct forms and functions. Over the past 20 years, advancements in elucidating various structural subtypes and identifying cellular locations of proteoglycans have led to the development of a complex classification system for proteoglycans. Proteoglycans can localize either intracellularly as components of secretory granules being anchored to the cell surface or by spanning the cell membrane in addition to being localized in the pericellular region as components of the basement membrane. The largest class of proteoglycans is, however, secreted into the extracellular space. These secreted proteoglycans are key structural components of cartilage, blood vessels, and the central nervous system and have the canonical role of maintaining the architecture of various tissues. In addition, secreted proteoglycans can interact with various receptors either as ligands or via their ability to interact with the natural ligands of these receptors, resulting in indirect regulation of receptor activation.

About the Journal

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Editors-in-Chief

Prof. Dr. Peter E. Nielsen

Department of Cellular and Molecular Medicine, Faculty of Health and Medical Sciences, University of Copenhagen, Blegdamsvej 3C, DK-2200 Copenhagen, Denmark

Prof. Dr. Lukasz Kurgan

Department of Computer Science, Virginia Commonwealth University, Richmond, VA 23284, USA

Author Benefits

Open Access

– free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Biochemistry)
