Special Issue

AAA+ Proteins in Health and Disease: Structure, Physiological Function, and Mechanisms of Action

Message from the Guest Editors

AAA+ (ATPases associated with a variety of cellular activities) proteins belong to a large protein superfamily that are involved in a broad range of physiological activities. Many of these processes are essential to the cell and range from transcription and DNA replication, membrane fusion, and protein homeostasis through the regulated turnover of protein by AAA+ proteases. The unifying feature of these proteins is the presence of one or more AAA+ domains (which are composed of 200–250 amino acids). Each module contains a number of signature elements, most notably the Walker A and Walker B motifs required for ATP binding and hydrolysis. In general, these ATP-dependent machines convert the chemical energy, stored in ATP, into a mechanical force, to drive the remodelling or unfolding of various different macromolecular complexes. Over the past few years, there have been a number of significant developments in the field that have advanced our structural, functional, and physiological understanding of these machines. This Special Issue aims to bring together original work and reviews that highlight the most recent and significant developments in the field.

About the Journal

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Editors-in-Chief

Prof. Dr. Peter E. Nielsen
Department of Cellular and Molecular Medicine, Faculty of Health and Medical Sciences, University of Copenhagen, Blegdamsvej 3C, DK-2200 Copenhagen, Denmark

Prof. Dr. Lukasz Kurgan
Department of Computer Science, Virginia Commonwealth University, Richmond, VA 23284, USA

Author Benefits

Open Access

— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Biochemistry)
