### **Message from the Guest Editors**

This Special Issue is focusing on the development of a novel “Nanosensors Array” which is required for highly selective, sensitive, rapid and early detection of specific coronavirus strains. In this Special Issue, we invite submissions of research findings relevant to a novel sensor using nanomaterials fabricated with interdigitated electrodes to monitor the interaction of aptamer and coronaviruses. This sensor can be used as a real time, non-invasive, point-of-care device for early diagnosis of emerging and re-emerging coronavirus infections in the world.

Deadline for manuscript
