

Special Issue

Electrochemical Biosensors for Disease Detection

Message from the Guest Editors

Detection of diseases at the early stage is important both for patient health and the reduction of treatment costs. Therefore, it is important to have highly sensitive and diverse techniques that can be effective in the early stages of diseases. Miniaturized, economic, and practical devices that have the capacity to replace time-consuming laboratory analyses are urgently needed for diagnostic processes. Electrochemical biosensors play a significant role in point-of-care testing (POCT) diagnostics because they are rapid, real-time, cost-effective, able for miniaturization, and intelligent. Hence, this Special Issue "Electrochemical Biosensors for Disease Detection" focuses on the recent advances of electrochemical biosensors in the sensitivity amplification strategies, point-of-care diagnostics, nanotechnology, and their applications in the detection and discovery of disease biomarkers (DNA, RNA, antigen, antibody, small molecules, and, etc.). We invite submissions of research that help to advance the field of electrochemical biosensors and their application for high-throughput analysis of disease biomarkers.

About the Journal

Message from the Editor-in-Chief

Biosensors is a leading journal, devoted to fast publication of the latest achievements, technological developments and scientific research in the exciting multidisciplinary area of biosensors. Both experimental and theoretical papers are published, including all aspects of biosensor design, technology, proof of concept and application. Special issues are devoted to specific technologies and applications, and a selection of the most outstanding papers each year is recognized. Pushing the boundaries of the discipline, we invite original papers, as well as timely reviews on cutting edge fields within the subject area.

Editor-in-Chief

Prof. Dr. Giovanna Marrazza

Department of Chemistry "Ugo Schiff", University of Florence, Via della
Lastruccia 3, 50019 Sesto Fiorentino, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Instruments and Instrumentation) / CiteScore -
Q1 (Instrumentation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.8 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
