Label and Label-Free Aptasensors

Message from the Guest Editors

Depending on the mechanism of sensing, aptamer-based sensors are classified under label and label-free formats. The labels can either be radioactive, fluorescent-active, electro-active molecules, metallic complex, nanoparticles, enzyme, or antibodies with detectable probes. In the case of label-free aptasensors, the aptamer is directly incorporated onto the transducer surface, which generates the analytical signal against its physiochemical interaction with the target analyte. Thus, the generated signal is measured in correlation to the analyte's concentrations, whereas in the labeled aptasensing formats, the signals measured are usually generated from notable changes in the labelled/tagged moieties. Aptamer-based sensors have played an important role in various fields, such as environmental, agriculture, biomedical, and forensic applications. The main topics of this issue is related but not limited to:

- biosensors
- aptamers
- labelled aptamers
- label-free aptamers
- electrochemical sensors
- optical sensors
- colorimetric sensors
- aptamer-based theranostics
- chemiluminescence sensors

About the Journal

Message from the Editor-in-Chief

Biosensors is a leading journal, devoted to fast publication of the latest achievements, technological developments and scientific research in the exciting multidisciplinary area of biosensors. Both experimental and theoretical papers are published, including all aspects of biosensor design, technology, proof of concept and application. Special issues are devoted to specific technologies and applications, and a selection of the most outstanding papers each year is recognized. Pushing the boundaries of the discipline, we invite original papers, as well as timely reviews on cutting edge fields within the subject area.

Editor-in-Chief

Prof. Dr. Giovanna Marrazza

Department of Chemistry "Ugo Schiff", University of Florence, Via della
Lastruccia 3, 50019 Sesto Fiorentino, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q1 (Instruments and Instrumentation) / CiteScore -
Q1 (Instrumentation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.8 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
