Liquid Biopsy Applications and Challenges

Message from the Guest Editor

Liquid biopsy is not literally a biopsy, but is a new diagnostic concept applied to optimize the management and follow up for cancer patients by using circulating tumor cells (CTC), cell free DNA (cfDNA), cell free RNA (cfRNA) and micro-RAN (miRNA) that are released from primary tumor or metastatic deposits into the peripheral blood or body fluids. Liquid biopsy is not an invasive procedure, and it aims to detect target molecules, monitor therapeutic response and resistance, avoid repeat tissue biopsies where the tissue is not available and predict prognosis. Hence, liquid biopsy has become the leading molecular technique for precision medicine. In fact, the applications of liquid biopsy go beyond the field of oncology, such as in the fields of obstetrics, cardiology and pediatrics.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Massimo Negrini
Department of Morphology, Surgery and Experimental Medicine,
University of Ferrara, Ferrara, Italy

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, PubMed, PMC, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biotechnology and Applied Microbiology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 22.3 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
