The Development of Prosociality: From Philosophy to Neuroscience

Message from the Guest Editors

Prosociality refers to behaviours intended to benefit others at a personal cost, involving helping, sharing, and volunteering behaviour. Three key aspects define prosociality: (i) the agent intentionally performs the act (ii) to benefit others (iii) without selfish motivations.

These behaviours have been studied from various perspectives, including philosophy, psychology, ethology, and economics. However, little is known about the neural correlates of early prosociality—whether a single neurocognitive mechanism underlies different forms of prosocial behaviour or if distinct mechanisms exist for each. Furthermore, the impact of technological development on the traditional conceptualization of human nature and the formation of the moral self has asserted its influence on developmental and behavioural choices. Thus, the aim of this Special Issue is to present recent interdisciplinary research in order to understand the changes in prosociality in humans brought about by new technologies. Types of papers expected:

- Review papers
- Brief reports
- Research papers

Guest Editors

Dr. Bahia Guellai

CLLE Laboratory, UMR CNRS 5263, University of Toulouse-Jean Jaurès, Toulouse, France

Dr. Mayilin Moreno

Research Group in Psychology, Cognition, Communication and Development (CCD), Universidad del Norte, Barranquilla, Colombia

Deadline for manuscript submissions

30 September 2025

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA
15260, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
