Special Issue

Cerebellar Ataxia with Neuropathy and Vestibular Areflexia Syndrome (CANVAS): A Multisymptomatic Neurologic Disease

Message from the Guest Editor

Initial descriptions of CANVAS (cerebellar ataxia, sensory neuronopathy and vestibular areflexia) were reported in the 1990s, its genetic defect was not found until 2019, when two groups described the expansion of the pentanucleotide AAGGG in intron two of the RFC1 gene responsible for most cases of CANVAS. Others pathogenic and non-pathogenic expansion, as point mutations, has been recently described in the RFC1gene. The underlying pathogenic mechanisms of RFC1 expansions have not been resolved yet. CANVAS is a multisystem syndrome, wherein sensory neuropathy is one of the most consistent findings, accompanied with cerebellar and vestibular dysfunction symptoms. Patients harboring a biallelic expansion in the RFC1 gene may also present with small fiber neuropathy, autonomic symptoms, chronic cough, cognitive impairment, and Parkinsonism. This Special Issue aims to provide readers with comprehensive and up-to-date studies pertaining to basic and clinical research in CANVAS that unravel the pathogenic mechanisms and clarify the clinical manifestations in CANVAS, potentially enhancing the patients' quality of life.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney
Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA 15260, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYNDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
