Nicotinic Acetylcholine Receptors: Novel Targets for Neurological Diseases

Message from the Guest Editor

Nicotinic acetylcholine receptors (AChR) play pivotal roles in the etiology of neurological disorders. The most well-known example is the AChR at the skeletal muscle neuromuscular junction, in which auto-antibodies against AChR subunits are a major underlying cause of Myasthenia Gravis. The AChR subunits expressed at synaptic and non-synaptic sites throughout the body are also important therapeutic targets for several neurological disorders. AChR make good therapeutic targets for neurological diseases because they are often modulatory and regulate the primary neurotransmitters glutamate or dopamine. In other instances, AChR gene duplication or deletion is causative in neurological disease. *CHRNA7*, for example, is an important gene in the 15q13.3 microdeletion syndrome. The $\alpha 9$ subunit is unique in that it is not expressed in normal brain, but may be expressed during migration and/or proliferation in glioblastoma. In this topic section we will focus on novel therapies that target AChR, particularly in neurological disorders that are currently resistant to treatment.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA
15260, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
