Clinical Research on Mood Disorders: Opportunities and Challenges

Message from the Guest Editors

Recent research has highlighted the role of glutamatergic and GABAergic pathways in the pathophysiology of mood disorders. Novel therapies such as ketamine and GABA-A receptor-positive allosteric modulators as rapid-acting treatment options for depression have shown remarkable promise. With renewed interest in psychedelics for mood disorders, there is cautious optimism in the field. In addition, with a better understanding of brain circuits, novel neuromodulation techniques such as accelerated TMS and DBS are revolutionizing the field. Although various biomarkers and neuroimaging studies have shown promise, inconsistent findings across studies limit the utilization of these advancements in routine clinical practice, highlighting the challenges. To accomplish the main objectives of this Special Issue, we welcome studies including, but not limited to, original research articles (clinical and pre-clinical), systematic reviews, meta-analyses, case series, perspectives, and case reports on these topics. Additionally, we would like to welcome articles on specific challenges related to the diagnosis and treatment of mood disorders in both adolescent and adult populations.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
