

## Special Issue

# Exercise and Brain Function— Series II

### Message from the Guest Editor

Scientific evidence for the beneficial effects of exercise on brain function continues to accumulate. The risk associated with many neurological diseases can be significantly reduced with exercise; however, the need for evidence-based scientific evaluation is critical, as not all exercises are created equal. In fact, it is just as important to identify exercises that may worsen neurological conditions. In the advent of a global pandemic, an equally important question is whether online interventions and assessments can yield the same results and scientific scrutiny that face-to-face research might. We continue to question whether certain targeted exercises could have potential for improving brain function. For example, as “multi-modal” strategies continue to gain popularity, how might we identify the specific exercises that are beneficial while isolating the others that do harm? The current Special Issue is intended to collect a selected number of articles that demonstrate how exercise might influence brain function. It further aims to investigate how neurological populations might benefit from specific and targeted exercise.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2024).

#### Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
