# Children with Autism Spectrum Disorders: Current Situation and Prospects

### Message from the Guest Editor

Because there is no medical test for its detection the genesis of ASD is hard to uncover, and diagnosis is based on a child's behavior and developmental history. ASD, pervasive developmental disorder not otherwise specified, and Asperger syndrome are now all included within an ASD diagnosis in addition to numerous other conditions that were formerly diagnosed separately. Are they similar or dissimilar, or, conversely, are all people on the spectrum distinct while also possessing similar traits? It is possible that the difference between ASD and other similar conditions explains the sharp increase in its incidence. Do racial differences exist? Are there variations in the prevalence of ASD by region? What, difference does breastfeeding have compared to formula? What about failure to thrive? Alcohol abuse or stress during pregnancy? How do hemisphericity and neurological asymmetries relate to ASD? Cognitive impairment and retained primitive reflexes? Developmental delays? Variations in parenting? Epigenetics? What effective tools do medical and educational systems have to identify, assist and treat children with ASD? Do any biomarkers exist or are there any under development?

---

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Clinical Neurology) / CiteScore - Q2 (General Neuroscience)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
