Epilepsy in Childhood and Adolescence: Where Do We Stand?

Message from the Guest Editor

Childhood epilepsies are a heterogeneous group of conditions with differing diagnostic criteria, treatment, and prognosis. Epilepsy affects children and adolescents not only physically but also cognitively, behaviorally, and emotionally and significantly impairs their functionality. Epilepsy in childhood requires a multi-faceted approach to treatment. At present, non-pharmacologic and pharmacological interventions have been shown to improve seizure activity, curb disruptive behaviors, and improve social communication skills with varying degrees of success.

However, current medications still fail to eradicate seizures in 30–40% of patients. Pharmacoresistant epilepsy can have a significant negative impact on patients' quality of life, interfering with memory, cognition, comorbid depressive states, and anxiety disorders. Therefore, clinical research on childhood epilepsy still has a long way to go.

This Special Issue focuses on promoting the development of new and effective treatments for epilepsy in childhood and adolescence, encouraging submissions that address the current state of the art in epileptology and that indicate new areas for future research.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
