How Does Motor Inhibitory Control Emerge from the Interplay between Reactive and Proactive Inhibition

Message from the Guest Editor

Inhibitory control is a multifaceted executive function that encompasses different types of processes. Motor inhibition is one distinct type of inhibition, which refers to the ability to inhibit prepotent motor responses, and it is usually measured via the go/no-go task or the stop-signal task. At its turn, motor inhibition has two separable neuropsychological domains, i.e., reactive inhibition, (the ability to stop a response outright when a stop instruction is presented), and proactive inhibition, (the ability to shape the motor strategy according to the context in which a subject is embedded). Even though it has been shown that they share partially overlapping neural substrates, there is no doubt that these two components have complementary functions and can be selectively impaired in diseases in which impulses are poorly controlled. Most of the previous works have focused on reactive inhibition, and only recently, proactive mechanisms have attracted attention. However, there is still sparse evidence of the way these two components interact with each other.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney
Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA 15260, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYNDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
