Special Issue

Neural Mechanisms and Patterns of Auditory Processes and Their Influence on Cognition

Message from the Guest Editors

Auditory perception is the ability to receive and interpret information through audible frequency waves transmitted through the ears or technological devices. With respect to this, cochlear implants and hearing aids play a fundamental role. Moreover, other sensorialities could influence or even support auditory perception and processing, in particular with reference to multisensory integration. Studies of auditory perception and cognition have been considered important in various branches; this leads to implications for typical development, aging, and also clinical settings. On the one hand, the exploration of the relationship between auditory perception and cognition provides benefits for developing various signal-processing applications and automatic speech recognition. These technologies are being matured, but there is still room for improvement...Moreover, hearing loss has been identified as potentially being one of the modifiable risk factors for dementia and cognitive decline. Several hypotheses have been proposed to explain the potential relationship between auditory and cognitive impairment, but the evidence is not clear.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney
Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA 15260, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYNDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
