Human Movement Analysis and Postural Control Research

Message from the Guest Editors

The brain serves a vital role in orchestrating movement, and one of its most crucial functions is controlling posture to maintain an upright body position. In recent decades, extensive research efforts have been dedicated to unraveling the intricate neural processes that underlie postural control mechanisms. The objective of this Special Issue is to explore the intricate intersection between neuroscience and human movement, offering insights into fundamental scientific inquiries as well as practical applications in therapy and training. For instance, we aim to unravel questions such as the following: How do neural mechanisms or adaptations within the neural system influence the nuances of postural movements? When discrepancies or alterations in these movement patterns emerge, what are the ramifications for the motor control models that are hypothesized to govern postural control? Researchers and experts are invited to contribute their insights, methodologies, and findings to shed light on these critical questions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA
15260, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
