

Special Issue

The Relationship between Maternal Nutrition and Neuropsychiatric Disorders

Message from the Guest Editor

Human and animal studies have shown that early life events during development (intra-uterine environment) such as maternal nutrition can predispose the offspring to developing these conditions. This Special Issue will concentrate on promoting research studying the effects of various environmental risk factors, including nutrition, during early development across the lifespan. As plasticity decreases over the lifespan, interventions applied during prenatal and/or early postnatal development might be the key in reducing the impact of neuropsychiatric disorders across the lifespan. In addition, this Special Issue will promote findings that potentially contribute to unravelling the underlying mechanisms of how maternal nutrition can induce susceptibility to different psychiatric disorders later in life and ultimately explore the effects of the optimization of maternal nutrition and other lifestyle interventions (such as physical exercise, food supplementation etc.) during prenatal or postnatal development that might improve or prevent these detrimental programming effects and reduce future health risks in the offspring.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
