Novel Insights into Neuroinflammation and Brain Disease

Message from the Guest Editors

Chemokines, a subclass of cytokines, are important modulators of immune activation and inflammation. Autoinflammatory central nervous system illnesses like multiple sclerosis (MS) or its animal counterpart, experimental autoimmune encephalomyelitis (EAE), appear to be significantly impacted by the recently identified atypical chemokine receptors (ACKRs). In contrast to other receptors, ACKRs function as scavenger receptors rather than appearing to trigger G protein signaling. C-X-C motif chemokine ligand (CXCL) and CXCL are bound by ACKR3, often referred to as CXCR7, one of the four ACKRs that have been identified to date. It also appears to mediate the migration of activated microglia, which have a significant impact on a number of CNS disorders, including Alzheimer's disease, multiple sclerosis, stroke, brain damage, and even mental illnesses. ACKR3 has been demonstrated to be expressed in many parts of the brain in animal models, with an increase seen in cases of inflammation, such as EAE.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney
Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA 15260, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYNDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
