Olfactory System and Brain Diseases: Investigating the Related Structures, Neurocircuits, and Functional Mechanisms

Message from the Guest Editor

The sense of smell is an ancient sensory system that is part of the brain's limbic network controlling emotions and drives. Unsurprisingly, olfaction has been implicated in several neurological and neurodegenerative diseases. For example, a number of disorders including Alzheimer's, Parkinson's, Huntington's and multiple sclerosis are all accompanied by some loss of smell. Indeed, in many cases, olfactory decline presages the more devastating symptoms of these conditions. Disorders of mood, including depression and anxiety, are also associated with olfactory dysfunction both as causes and as effects. Thus, the olfactory system is, and will likely remain, a key component of efforts to discover the etiologies, treatments and eventual cures for a host of brain diseases which still cause so much human suffering. In this Special Issue, we invite original research and focused reviews from both basic and clinical scientists on any topic investigating the nexus between olfaction and neurological disease. We are particularly interested in work using modern technologies and investigating novel topics.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
