

Special Issue

Rhythmic Motor Pattern Generation

Message from the Guest Editor

Rhythm is fundamental to coordinated and economical movement. In this Special Issue, we will explore the human capacity to produce coordinated and economical movement through the generation of rhythms. Coordinated and rhythmical motion is the outcome of the organisation of the neuromuscular system with involvement of rhythmic pattern generators centrally. We will also propose links between rhythmic pattern generation and coordinated effector output to optimise function in sport and activities of daily living, such as walking, running, swimming, golf, dance, hand movements and playing of musical instruments.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
