Sexual Differences in Addictions and Dual Disorders: Importance in Gender Perspective

Message from the Guest Editors

Dear colleagues, Basic, preclinical and clinical research has shown the presence of biological differences between the sexes from the beginning of embryonic development and throughout the entire lifecycle. This dimorphism affects health, protective or vulnerability factors, social and relational life, the search for treatment, and responses to therapeutic interventions. However, studies of addiction and dual diagnosis continue to be carried out mainly in male patients. This prevents obtaining knowledge on the specific characteristics and needs of women. A first step to improve this knowledge is to update the sex and gender differences found in research into addiction and dual disorders. We encourage original research and review articles about sex and gender differences in addiction and dual disorders: preclinical and clinical models; genetic background; neurobiological, psychological, and social mechanisms; vulnerability factors; biomarkers; social and developmental factors; diagnosis and diagnostic instruments; clinical presentation; response to existing pharmacological and psychological therapies; unmet research, diagnosis and treatment needs; and gender perspectives.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
