Contributions of Multisensory Processing and Integration in Successful Ageing

Message from the Guest Editor

Current efforts to ameliorate the negative effects of normal ageing have been focused on research to prevent falls, enhance cognitive processes, or provide assistive companions. To date, however, no effort has been made to exploit the benefits of multisensory integration for successful ageing. This is an important gap particularly because our physical environment provides us with a variety of sensory information, and adaptive functioning requires the brain to integrate these multiple sources of information in a way that allows the individual to operate within such an environment in a goal-directed fashion. Sensory inputs are integrated to create a multisensory experience that allows for faster and more accurate detection and reaction to events, the flexible deployment of attention to events of interest, better encoding and retrieval of information, and the faster acquisition of new information. This Special Issue aims to bring together basic and applied research on the contributions of multisensory processing and integration in healthy ageing to collect a body of literature, with the aim of paving the path of future interventions in the ever-growing ageing population.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA
15260, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
