# Non-invasive Brain Stimulation in Cognitive Function

### Message from the Guest Editor

Examining the relationship between brain activity and cognitive function leads to a greater understanding of psychology, evolution and the medical sciences. In this issue of Brain Sciences, we will present research that employs brain stimulation to further uncover aspects of cognition. While Transcranial Magnetic Stimulation and Direct Cortical Stimulation will be the most common papers, all methods of stimulation are welcome. Both repetitive and single-pulse methods, as well as those employing stimulation to gauge activity (e.g., MEPs and paired pulse) are encouraged. Topics can include behavior as well as cognition, both broadly defined
