How Do Astrocytes Shape Synaptic Transmission and Plasticity?

Message from the Guest Editors

Over the last two decades, neuroscience has witnessed a major shift in the way we approach the operation of various brain circuits. It has become clear that the simplistic idea to envisage the brain as a network of interconnected neurons has failed. Neurons never operate in isolation, and they are actively modulated by astrocytes. Moreover, in some cases, we see evidence of the active participation of astrocytes in the most basic physiological functions of the brain, for example, in the context of cardiorespiratory homeostasis. There are numerous ways via which astrocytes modify and control neuronal networks. This includes control of the extracellular glutamate concentration, control of ions, such as the local potassium concentration, control of the local pH and metabolic and signalling interactions via lactate and ATP. All of these pathways are powerful enough to change the output of neuronal networks with implications for all brain functions, from control of breathing to plasticity, memory and sleep cycle control, among others. We are looking at contributions from all laboratories.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA
15260, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
