

Special Issue

Auditory System

Message from the Guest Editors

There is increasing evidence that the brain needs to adapt to changes in the auditory system (from, e.g., hearing loss, tinnitus, *etc.*) and that cortical reorganization occurs following hearing loss in patients. Fortunately, fMRI and other physiological tools can potentially reflect this kind of plasticity. The current Special Issue is meant to collect a selected number of articles involving auditory system research. The article type can be a research article, review paper, technical report, communication, letter, editorial, *etc.* There is no limitation on article length, and the experimental data should be provided in as much detail as possible, so as to justify the conclusions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
