

## Special Issue

# M/EEG Analysis for Alzheimer's Disease Diagnosis and Characterization

### Message from the Guest Editors

Dementia due to Alzheimer's disease (AD) is a neurodegenerative disorder associated with cognitive impairment; behavior disorders; memory loss; and problems with abstract reasoning, planning, and decision making. As a consequence of the pathophysiological processes, neural activity from AD patients is progressively modified. In order to characterize these neural changes, electroencephalography (EEG) and magnetoencephalography (MEG) have gained prominence over the past few decades, mainly due to their ability to record the transient and rapid nature of brain activity. The present Special Issue aims to gather original research studies that provide advances in the application of M/EEG for the characterization and classification of patients with AD and/or its prodromal stage, mild cognitive impairment (MCI).

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Clinical Neurology) / CiteScore - Q2 (General Neuroscience)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
