The Future of Neurostimulation

Message from the Guest Editor

The increasingly precise modulation of signal transduction at the neural level through external devices in both physiological and pathological settings has resulted on the one hand in the contribution of neurostimulation—whether magnetic or electrical—to improving our understanding of the mechanisms underlying, among others, neurodegeneration, hyperexcitability, altered states of consciousness, and sensorimotor control, in addition to the varying responses to medications. On the other hand, the refinement of health technologies has made it possible to more precisely tailor interventions according to the individual subject. In this Special Issue we are soliciting works that illustrate the state-of-the-art of the most promising and powerful tools for the collection of real-world data, including wearable health technologies, portable devices or sensors, along with computational algorithms which overall contribute to fill the gap of knowledge of the long-term outcome of neurostimulation while providing an in-depth quantification of its effects in subjects' daily environments.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA
15260, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
