Special Issue

The Promise and Future of the Trigeminocardiac Reflex

Message from the Guest Editors

Since trigeminocardiac reflex (TCR) was first described in 1999, it has gained enormous interest all over the world and is mentioned as a potential complication in nearly all textbooks about neuroanaethesia or skull base surgery. We are also the first to have pushed TCR as a cause of surgical complications in non-surgical disorders. This has opened the window for research and gives promise to the potential of the TCR. In this Special Issue, we will use this widening of the TCR and try to better understand the future potential of the TCR from a wide spectrum of views (basic research, anesthesia, surgery, neurology, etc.).

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Stephen D. Meriney

Department of Neuroscience, University of Pittsburgh, Pittsburgh, PA 15260. USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYNDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the second half of 2024).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
