Engineering, University of
Toronto, 35 St George St.,
Toronto, ON, Canada

Deadline for manuscript
submissions:

closed (30 June 2023)

Message from the Guest Editors

While there has been much in the way of research on occupational health and safety issues, the construction industry still shows poor safety levels in terms of accident likelihood and severity worldwide. This Special Issue covers the general areas relating to construction safety and management, including system, policy, organizational and technical aspects. This Special Issue aims to collate state-of-the-art developments in this area; papers are invited that address the development of construction safety and management, including, but not limited to:

- Construction safety policy and regulation.
- Design for safety/prevention through design.
- Construction safety management.
- Accident analysis and investigation.
- Digital and smart technology for safety.
- Off-site construction for safety.
- Worker behavior and safety.
- Risk assessment.
- Other topics on health and safety in construction.
- We look forward to receiving your submissions.

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (*Architecture*)
