# Advanced Building Performance Analysis

Guest Editor:

**Prof. Dr. Natasa Nord**
Department of Energy and Process Engineering, Faculty of Engineering, Norwegian University of Science and Technology(NTNU), NO-7491 Trondheim, Norway

Deadline for manuscript submissions:
**closed (20 October 2022)**

## Message from the Guest Editor

This Special Issue will deal with implementation of the existing and new methods to analyze and handle building data for improved energy efficiency, better thermal comfort, operation optimization, and better control, prediction, fault detection and diagnosis, etc. Topics of interest for publication include, but are not limited to:

- Digitalization of building service systems
- Existing and new statistical methods to handle building data
- Advanced building analyses for prediction of building energy performance
- Advanced building data analyses for improved operation and control of buildings
- New statistical methods for single building analyses and prediction
- New statistical methods for building group analyses and prediction
- Digitalization for better demand side management

For scholars interested to submit papers to the Special Issue, please click "Submit to Special Issue" or contact Astoria Yao: astoria.yao@mdpi.com.

# Special Issue

## Editor-in-Chief

**Prof. Dr. David Arditi**
Construction Engineering and
Management Program,
Department of Civil,
Architectural, and Environmental
Engineering, Illinois Institute of
Technology, 3201 South
Dearborn Street, Chicago, IL
60616, USA

## Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.
**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.
**Journal Rank:** JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (Architecture)
