

## Occupant Comfort and Well-Being

Guest Editor:

**Dr. Joon-Ho Choi**

School of Architecture, University  
of Southern California, Los  
Angeles, CA 90089, USA

Deadline for manuscript  
submissions:

**closed (30 September 2018)**

### Message from the Guest Editor

Building performance is critical for environmental sustainability and occupant environmental comfort and wellbeing, which extensively impacted the growth of numerous environmental design and technology. However, a lack of understanding of how the environment affects human responses and behaviours could result in environmental discomfort and inefficient building performance. This Special Issue invites scholars to contribute original research articles with regard to design, engineering, psychological and physiological issues that are relevant to each individual's comfort, health, and work productivity, which could answer numerous challenging questions in building design and performance.

Potential research topics include (but are not limited to):

- Post-occupancy evaluation and measurement
- Indoor environmental quality (IEQ)
- Occupant IEQ perception and behaviours
- Innovative/Sustainable design for human comfort
- Health and work productivity
- Intelligent IEQ monitoring and management (systems)
- Data-driven environmental comfort modelling
- User-centred environmental control

## Editor-in-Chief

### Prof. Dr. David Arditi

Construction Engineering and Management Program,  
Department of Civil,  
Architectural, and Environmental  
Engineering, Illinois Institute of  
Technology, 3201 South  
Dearborn Street, Chicago, IL  
60616, USA

## Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (Architecture)
