Properties of Wood and Bamboo Used in Construction

Message from the Guest Editors

Along with the issues of sustainability, wooden constructions and bamboo products have arisen as eco-friendly solutions for building sectors. By means of processing or engineering techniques, the mechanical properties and applicational versatilities of wood and bamboo can be considerably enhanced. Associated evaluating methods have led to a significant increase in the reliability of engineered components and structures. Based on the current progress and propagation, wooden constructions and bamboo products have achieved a promising milestone. The markets and users are looking forward to the further development of wooden construction and bamboo products. Regarding the large-scale structures and highly engineered elements, advanced technology and science need further promotion and improvement. About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
