

# Special Issue

## Lime-Based Materials for Historic Buildings

### Message from the Guest Editors

The maintenance and restoration of historic masonry buildings is an important issue in today's efforts to preserve the world's vast built heritage. However, problems related to lime-based materials currently used to repair or restore such structures still persist, mostly due to a loss of know-how and expertise on the production and application of these materials. This Special Issue seeks to help solve this problem by intending to collect the latest research on lime-based materials for historic buildings. Topics of interest include (but are not limited to) the following: (i) characterization of old lime-based binders and materials; (ii) lime technology; (iii) viable lime-based materials for the conservation and repair of historic buildings; (iv) innovative tests to characterize these materials; (v) best practices for lime-based applications; (vi) the role of natural and artificial admixtures and additions; and (vii) the durability and compatibility of lime-based materials applied on historic masonry structures.

## About the Journal

### Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

### Author Benefits

#### High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Construction and Building Technology) /  
CiteScore - Q1 (Architecture)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
