

Special Issue

Campus of the University: Spatial Evolution, Societal Response, and Design Innovation

Message from the Guest Editors

This Special Issue aims to gather cutting-edge research on the spatial evolution, functional transformation, technological adaptation, and heritage protection of university campuses. Contributions are welcome from scholars in architecture, planning, geography, education, and environmental studies, offering a systematic and comparative academic overview of campus development across regions. Suggested areas of interest include, but are not limited to, the below topics. 1. Urban–Campus Relationships; 2. Campus Planning and Architectural History; 3. Spatial Forms and Architectural Systems; 4. Sustainability and Green Transition; 5. Digitalization and Learning Model Transformation; 6. Cultural Perspectives and Mental Well-being. **Submissions focusing on regional, urban, ecological, and landscape-scale issues related to campus environments are encouraged to submit to *Land*, while contributions emphasizing architectural design, spatial typology, and building-scale innovation should be directed to *Buildings*.**

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
