

## Special Issue

# Selected Papers from the 17th International Conference on Alkali-Aggregate Reaction in Concrete (ICAAR 2024)

### Message from the Guest Editor

Alkali-aggregate reaction is one of the most harmful distress mechanisms affecting concrete infrastructure worldwide. AAR is a chemical reaction between alkali-hydroxides from the concrete pore solution and some unstable mineral phases present in the aggregates used in concrete. AAR provides a gel that swells upon moisture uptake, leading to induced swelling and deterioration of the affected concrete. The purpose of this Special Issue is to select important contributions from the 17th International Conference on Alkali-Aggregate Reaction in Concrete (ICAAR 2024, Ottawa, ON, Canada) that discuss alternative, advanced, and innovative techniques/protocols able to a) reliably and quantitatively appraise the current (i.e., diagnosis) and future (i.e., prognosis) condition of AAR-affected infrastructure, b) evaluate the current and future structural implications of the induced expansion and deterioration, c) cease or at least significantly decrease AAR-induced development rate in the field, increasing the serviceability, durability, and safety of affected structures, and d) better guide infrastructure owners and engineers in the decision making of affected structures.

### Guest Editor

Dr. Leandro F. M. Sanchez

Department of Civil Engineering, Faculty of Engineering, University of Ottawa, Ottawa, ON K1N 6N5, Canada

### Deadline for manuscript submissions

closed (31 March 2025)

## About the Journal

### Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

### Author Benefits

#### High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Construction and Building Technology) /  
CiteScore - Q1 (Architecture)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
