

Special Issue

Intelligent Risk Identification and Management in Urban Built Environment

Message from the Guest Editors

This Special Issue endeavors to delve into the most recent progress in geotechnical or geological risk analysis within the urban built environment. We cordially invite researchers and practitioners to submit their original research papers, theoretical and experimental works, case studies, or comprehensive review papers for potential publication in this special issue. This collective effort aims to enhance our comprehension of risk management in urban construction. Relevant topics, within the context of urban built environment, to this Special Issue include but are not limited to the following subjects:

- New approaches for risk identification and management
- Risk-based design/assessment of geo-structures
- Risk assessment of geological hazards
- Modelling of geological/geotechnical uncertainties
- Remote sensing and surface subsidence analysis

Guest Editors

Prof. Dr. Tianzheng Li
Dr. Jingshu Xu
Dr. Xiangfeng Guo

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
