Recent Scientific Developments in Sustainable Building Materials and Structures

Message from the Guest Editors

Carbon emissions from the building and construction sector are a growing environmental problem. Sustainable building materials have been paid more and more attention by scientists and engineers because of their advantages of energy saving, pollution reduction, and resource conservation.

This Special Issue brings together recent scientific developments in sustainable building materials, in order to examine, explore, and critically engage with issues and advances in sustainable building materials that can both provide several environmental benefits and create cost-effective products. The papers collected in this Special Issue can help researchers, engineers, and scientists to find more advanced techniques and alternative approaches towards sustainable building material development. About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
