## Application of Environment-Friendly Materials in Civil Engineering

### Message from the Guest Editors

In the process of civil engineering construction, the government have been paying attention to carbon emissions, traffic noise and environmental. Low-carbon materials, environment-friendly materials and the near-zero carbon utilization of solid wastes have been studied by researchers and applied in civil engineering construction. This Special Issue, titled "Application of Environment-friendly Materials in Civil Engineering", aims to bring together researchers, experts, and practitioners to discuss the latest research findings on the design, mechanical properties, durability, microstructure, and environmental impact of materials used in civil engineering construction. The Special Issue will cover, but is not limited to, the following:

- Low-carbon utilization of solid wastes;
- Warm mix asphalt technology;
- Reclaimed asphalt pavement;
- High performance asphalt;
- High performance concrete;
- New type sound barrier;
- Micromechanical analysis of asphalt mixtures;
- Finite element analysis of pavement and bridge structure.

## About the Journal

### Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

### Author Benefits

#### High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Construction and Building Technology) /  
CiteScore - Q1 (Architecture)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
