

Special Issue

The Properties of Composite Materials in Construction

Message from the Guest Editor

The development of composite building materials in recent years has significantly improved their properties. Breakthroughs in novel technologies, such as building materials from waste materials, artificial intelligence, low-carbon technologies, and resilient structures, provide new opportunities for developing civil engineering disciplines. This Special Issue aims to present the latest findings on developing and testing environmentally friendly materials and solutions to the problems associated with achieving sustainability in civil engineering. It is my pleasure to invite you to submit an original manuscript to this Special Issue focusing on gathering knowledge and experience in the latest advances and trends in the above areas. Potential topics but are not limited to: The testing of structures composed of novel concrete materials
Real-time damage detection and damage imaging
Novel algorithms for non-destructive testing (NDT) data analysis
Artificial intelligence and machine learning applications for the analysis of data from NDT measurement
Health and stability monitoring in civil engineering by the NDT method
Other non-destructive acoustic testing methods for composite materials

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
