

Special Issue

Acoustics and Perception in Special Shape Spaces

Message from the Guest Editors

With the evolution of room acoustics science, sound propagation in auditoriums has become thoroughly understood and accurately predicted by various models. In this Research Topic, any research that contributes to our understanding of acoustics and perception in special spaces, including, but not limited to, extra-large waiting spaces, exhibition halls, large sports stadiums, and subways, etc., is welcome for submission. We also expect interdisciplinary communication and cooperation among researchers in acoustics, psychology, physiology, sociology, and so on, to make the study's scope more distinct, elaborate, and prolific. This Topic include, but are not limited to:

- Systematic studies on the acoustic environment in special spaces
- In-depth discussion on the acoustic perceptual differences in special and ordinary spaces
- Research on tools and methods to evaluate the acoustics in special spaces
- The perceptual framework in the sound perception of special spaces by different occupants
- Changes in the acoustic situation and perception of special spaces during the COVID-19 pandemic
- Acoustic and non-acoustic factors on sound perception in special spaces

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
