

## Special Issue

# Performances of Structural Concrete: Data-Driven Analysis Using AI, Numerical and Experimental Investigation

### Message from the Guest Editors

This Special Issue focuses on integrating data-driven methodologies, numerical simulations, and experimental investigations to enhance the understanding and prediction of structural concrete behaviours.

Numerical methods, including finite element analysis, complement these data-driven approaches by providing detailed insights into concrete's mechanical properties and failure mechanisms. Experimental investigations remain crucial, offering empirical data to validate and refine computational models and AI predictions. By synergising these approaches, this issue aims to address the complexities of concrete performance, such as durability, strength, and resilience under dynamic loads. Contributions to this issue encompass a wide range of topics, including, but not limited to, AI-based predictive modelling, advancements in numerical techniques, innovative experimental methodologies, and case studies demonstrating practical applications. This multidisciplinary approach enhances the predictive capabilities and reliability of structural concrete analyses and paves the way for developing smarter, more resilient infrastructure.

## About the Journal

### Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

### Author Benefits

#### High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Construction and Building Technology) /  
CiteScore - Q1 (Architecture)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
