

Special Issue

Disaster Mitigation, Risk Reduction, and Resilience Design of Engineering Structures

Message from the Guest Editors

Disaster mitigation, risk reduction, and resilience design of engineering structures under natural hazards are topics of great interest and are important for protecting human life and reducing economic losses..... This Special Issue is dedicated but not limited to current research on theoretical, computational, experimental, and relevant research works on advanced methods in disaster mitigation, risk reduction, and resilience design of engineering structures, including methodologies and innovations on mechanical performance evaluation; modeling technologies and simulations on failure mechanisms; methodologies on vulnerability, risk, reliability, and resilience assessment; applications on disaster mitigation and risk reduction; and advanced design methodologies of innovative on resilience design of engineering structures under earthquakes, fires, winds, and tsunamis For further reading, please follow the link to the Special Issue Website at:

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
