

Special Issue

Study of Building Detection, Assessment, and Management: Based on Computer and Information Technologies

Message from the Guest Editors

We are excited to announce a Special Issue of *Buildings* that focuses specifically on the application of computer and information technologies in the field of building detection, assessment, and management. Computer and information technology can automate the process of building detection, assessment, and management, which is essential for ensuring safety and efficiency in various domains. However, applying these technologies in complex and dynamic environments poses new challenges and risks that require innovative solutions and methods. To address these issues, this Special Issue invites original research on the utilization of computer and information technology in building detection, assessment, and management, with a focus on the progress, methodologies, and practical applications that drive innovation in this particular field. Topics of interest include, but are not limited to, the following:

- Automated building detection;
- Advanced building assessment techniques;
- Intelligent building management systems;
- Data integration and decision support systems;
- Real-time monitoring and emergency response.

Guest Editors

Dr. Ting-Kwei Wang
Dr. Pin-Chao Liao
Dr. Xiaowei Luo

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
