

Special Issue

Performance Evaluation and Improvement of Corroded Steel Structures

Message from the Guest Editors

Steel structures exposed to corrosive environments (e.g., marine, industrial, acid rain) for a long time inevitably suffer from corrosion even if some protective measures are taken. Corrosion may lead to the degradation of material and structural performance, such as bearing capacity, stability, seismic performance, fatigue life, etc., resulting in reduced reliability, shortened life, and even increased collapse risk. This produces an urgent need for the methodologies/technologies of safety evaluation, risk assessment, and performance improvement for in-service steel structures with corrosion damage. Therefore, this Special Issue focuses on advances in durability test techniques, corrosion detection technologies, structural static/dynamic performance evaluation methods, and the maintenance and reinforcement technologies of steel structures, and original research papers, communications, and reviews are all welcome.

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
